These surveys were conducted on the telephone by trained interviewers among voters in all states of Australia and in both city and country areas. Telephone numbers and the person within the household were selected at random. The data has been weighted to reflect the population distribution. This latest survey is based on a reanalysis of surveys conducted during July - September 2008 and is based on a total of 6,845 interviews among voters for the voting intention and satisfaction with Prime Minister questions, while the satisfaction with Opposition Leader and the better Prime Minister questions are based on 5,697 interviews among voters up until the point where Mr Malcolm Turnbull became Opposition Leader. Individual state sample bases range from 700 to 1,994 voters. Note: sample size in Tasmania is too small for a meaningful separate analysis, however Tasmania is included in total figures. Northern Territory is excluded. Sampling error ranges from plus or minus 1.2 percentage points on the total sample to plus or minus 3.7 percentage points for the state with the smallest sample size.
